- **Team Name- Team Onix**

IDEA TITLE

❖ Proposed Solution

- A **web-based digital case sheet system** that replaces unstructured paper-based patient case recording with a **structured, validated digital workflow**.
- Create Case → Digital Form → Critical Validation → Save Draft / Submit → Digital Record → Search • View • Print
- Instead of simply digitizing a paper form, the system actively checks whether essential information is complete before allowing submission.

TECHNICAL APPROACH

Layer	Technology
Frontend	HTML5, CSS3
Logic	JavaScript
Storage	Browser LocalStorage
Interface	Responsive Web UI
Output	Browser Print / PDF

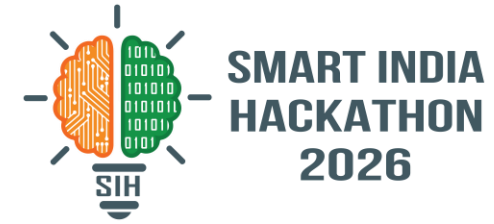

•Technical

- Uses lightweight web technologies
- No specialized hardware required
- Easy to deploy through a web server
- Modular architecture allows future backend integration

•Operational

- Simple interface for healthcare staff
- Structured fields reduce inconsistent data entry
- Immediate feedback on missing information
- Draft functionality prevents loss of partially entered cases

IMPACT AND BENEFITS

Target Users

- Hospital
- Doctors
- Nurse
- Medical staff

Expected Impact

Before:

Paper case sheet-> Manual Entry->Missing Information->Incomplete Record->Difficulty Finding Records

With our solution:

Digital form-> Automatic Validation->Missing field Identified->Complete case submitted->Searchable digital record
